

A =

B =

Window sill =

What do I want :

1. When user click <<<< all previous images to be displayed;
2. When user click >>>> all next images to be displayed;
3. When user reach the image that he want, he has to complete the value next to the image (A, B and windows sill values) and then to click **Add**;
4. When he clicks **Add**, a new page must be adeed to the file and this image to be the first.
5. He continue his searched thru the pictures and when he finish his option he must save the file.

Is this possible ?
