

Duplication of input from one text field to another

Javascript:

Text Field

Text Field

This field contains the calculation and is automatically set to "calculated - read only"

FormCalc:

Text Field

Text Field

This field contains the calculation and is automatically set to "calculated - read only"

Global Binding:

Text Field

Text Field

This set of fields do not have any calculation and therefore you can input text into either field.

Referencing an Object

Text Field

Text Field

This field will show up "Object82249996" as it is assigning the object itself to the field rather than the value of the object. Notice that this does not use .rawValue
