

Airport Code

```
// first have a switch statement to look at the dropdown
switch (airportCode.rawValue)
{
    case "EDDN":
        var vEmail = "someone@EDDN.ie";
        var vSubject = "Airport: EDDN"
        break

    case "EDDP":
        var vEmail = "someone@EDDP.ie";
        var vSubject = "Airport: EDDP"
        break

    case "ETAR":
        var vEmail = "someone@ETAR.ie";
        var vSubject = "Airport: ETAR"
        break

} // close switch statement

// then set up script for sending an email with the form attached in a variety of types (see cSubmitAs: XML, PDF, XDP).
var vBody = "Hi\n\nPlease find attached the completed form in XDP format.\n\nRegards,\n\nNiall"
event.target.submitForm({cURL:"mailto: " + vEmail + "?subject=" + vSubject + "&body=" + vBody,cSubmitAs:"XDP",cCharset:"utf-8"});

// If you only wanted to send an email instead, you would replace the two lines above with the following:
var vBody = "Hi\n\nThis is a standard email message that can be added to in the email client.\n\nRegards,\n\nNiall"
event.target.app.mailMsg({bUI: true, cTo: vEmail, cSubject: vSubject, cMsg: vBody});
```
