

Offense #1 Title	<input type="text"/>
Offense	<input type="text"/>
Statue Code	<input type="text"/>
Penal Code	<input type="text"/>
Criminal Class	<input type="text"/>

Once the user has selected the offense title and it generates the above information, I was wondering if you can script it to open another adobe form. For example when user selects the Abandon Endanger child criminal negligence, (I already made this complaint in adobe) it would open the file.
