## Adobe Experience Cloud Debugger overview

The Adobe Experience Platform Debugger extension for [Chrome](#) and [Firefox](#) examines your web pages and helps you find problems with how your Adobe Experience Cloud solutions are implemented. To know more, visit [page](#).

You can use Platform Debugger with the other Adobe activation solutions to perform the following:

1. Use [tags](#) to insert code that activates [Adobe Experience Cloud](#) products on your pages.
2. Use the [Auditor tab](#) in Platform Debugger to test your implementations.
3. Use event-based and solution-specific tools in Platform Debugger to debug issues found by Auditor or to examine other information about your implementations.

Checkout the Video [Tutorial](#) to understand the application.

If you have sailed till this point, shore is near. Take practice exam and then actual exam to be certified professional. 😊
